

Probabilistic Parameter Estimation of the US 10-Year Treasury Yield: A Frequentist and Bayesian Comparative Analysis for ASX Energy Stock Inference – Self Assessment

COMP3018 – Probabilistic Machine Learning

Thomas Allen – alle0376

Artefact 1

Tonsley Campus

Category	Weighting	Self-Assessed Grade	Comments
Technical Report	27%	Distinction	Strong report, excellent analysis, considered many factors, strong analysis of Frequentist vs Bayesian
Technical Implementation	30%	Distinction	Sophisticated structure, fully working, adheres to Google style guide, both estimations implemented.
Video Demonstration	5%	Credit	Speaking could have been clearer, demonstration was thorough, under the 5 minute limit.
Professional Standards	5%	High Distinction	Adheres to 1500 +/- 10% word limit non-inclusive of appendix, AI policy included, self assessment complete, Times New Roman 12pt, header and footer all implemented
Project Management & Workflow	13%	Distinction	README and requirements files included to a high standard, outputs put

			into a data file inside directory
Team Collaboration & Integration	20%	Distinction	Strong statement, under 200 words, identifies how the individual node relates to the group, excellent insight and considerations.
