

Sequential Probabilistic Inference of US 10-Year Treasury Yield Regimes for Conditional ASX Energy Stock Analysis – Self Assessment

COMP3018 – Probabilistic Machine Learning

Thomas Allen – alle0376

Artefact 2

Tonsley Campus

Category	Weighting	Self-Assessed Grade	Comments
Technical Report	27%	High Distinction	Valid valuation of Markov modelling and justification, state transitions and inference explicitly detailed, great analysis of computational complexity and scalability
Technical Implementation	30%	High Distinction	Robust sophisticated architecture, easy to follow, appropriate comments and headers, meets professional standards
Video Demonstration	5%	Distinction	Slightly under 5 minutes, sitting at 4:55, decent quality, explains everything, full code ran no issues.
Professional Standards	5%	High Distinction	Adheres to word limit, IEEE citation appropriate, included AI declaration and self-assessment, formatting correct.

Project Management and Workflow	13%	High Distinction	Well structured, requirements and readme file present, clear evidence of planning throughout
Team Collaboration and Integration	20%	Distinction	Statement under 200 words, could be more detailed, decent analysis of how their role plays into the bigger picture.
